Application No.: 10/537,962 Docket No.: 12810-00095-US

LISTING OF CLAIMS

We claim:

- (Previously Presented) A process for preparing polyoxyalkylene glycols of
 comprising copolymerizing, in one stage, tetrahydrofuran and alpha,omega-diols with the
 exception of butanediol as the comonomer in the presence a heteropolyacid and of a
 hydrocarbon, distilling off a mixture of water and the hydrocarbon from the
 copolymerization, and terminating the polymerization by adding water when a molecular
 weight of from 1,000 to 2,800 is attained.
- (Previously Presented) The process as claimed in claim 1, wherein between 0.1
 and 10% by weight of water, based on the total amount of tetrahydrofuran, comonomer
 and heteropolyacid already used for the copolymerization, is added.
- (Previously Presented) The process as claimed in claim 1, wherein the attainment
 of the molecular weight is determined by measuring the electrical conductivity of the
 copolymerization mixture.
- (Previously Presented) The process as claimed in claim 1, wherein the water is added at a conductivity of from 0.1 to 5 µS.
- (Previously Presented) The process as claimed in claim 1, wherein the alpha, omega-diol used is neopentyl glycol.
- (Previously Presented) The process according to claim 2, wherein the attainment
 of the molecular weight is determined by measuring the electrical conductivity of the
 copolymerization mixture.

Application No.: 10/537,962 Docket No.: 12810-00095-US

7. (Previously Presented) The process according to claim 2, wherein the water is added at a conductivity of from 0.1 to 5 μ S.

- 8. (Previously Presented) The process according to claim 3, wherein the water is added at a conductivity of from 0.1 to 5 μ S.
- (Previously Presented) The process according to claim 2, wherein the alpha, omega-diol used is neopentyl glycol.
- (Previously Presented) The process according to claim 3, wherein the alpha, omega-diol used is neopentyl glycol.
- (Previously Presented) The process according to claim 4, wherein the alpha, omega-diol used is neopentyl glycol.
